

The aerospace industry has always been at the forefront of technological progress.

Advanced jet engines, defense electronics, satellites and the design and incredibly complex systems integration in large commercial aeroplanes involve perhaps the world's most advanced technologies, matched by few other sectors. Barriers to entry are high.

Our clients are engaged today in exploring technologies we won't see in products for another 15 to 20 years. Our international clients work in partnership with Italian companies in developing and producing world market winning products.

We can help you find news, information and identify themes for articles and broadcasts in aerospace and defence.
